Introduction

NVIDIA offers training for diverse needs, giving individuals and teams across organizations what they need to advance their knowledge in AI, accelerated computing, data science, data center administration, graphics and simulation, networking, and more.

With access to high-performance computing, you'll learn how to train, optimize, and deploy neural networks using the latest deep learning tools, frameworks, and SDKs. You'll also learn how to assess, parallelize, optimize, and deploy GPU-accelerated computing applications.

Our training program offers both self-paced online courses and instructor-led, prescheduled workshops. The self-paced courses range from 10 minutes to 8 hours and guide you through applying a specific technology, setting up a project, or administering solutions in a data center. Instructor-led workshops and boot camps go deeper into topic areas, teaching you how to implement a project or solution from end to end. Both types of courses give you valuable hands-on experience using the latest technologies.

Why Choose NVIDIA for Training?

- > Learn how to build deep learning and accelerated computing applications for industries such as healthcare, robotics, autonomous driving, manufacturing, and more.
- > Gain hands-on experience with the most widely used, industry-standard platforms including software, hardware, tools, and frameworks. Each student will have access to a fully configured, GPU-accelerated server in the cloud or access to NVIDIA solutions in our training lab.
- > Become proficient in administering NVIDIA hardware and software solutions such as DGX™, InfiniBand, Cumulus, NVIDIA AI Enterprise, and more.
- > Access instructor-led workshops and online courses from anywhere using just a laptop and internet connection.
- > Acquire real-world expertise through content designed in collaboration with industry leaders such as Children's Hospital of Los Angeles, Mayo Clinic, and PwC.
- > Earn NVIDIA certifications and course completion certificates to indicate subject matter competency and support your career growth.

For team training, contact an **NVIDIA training advisor**, who will work with you to create a customized plan that addresses your team's specific training needs and is aligned to your business objectives and priorities.

Building AI-Based Cybersecurity Pipelines	<p>Traditional cybersecurity methods include creating barriers around your infrastructure to protect it from intruders. However, as enterprises continue to digitally transform, they're faced with a proliferation of devices, more sophisticated cybersecurity attacks, and an incredibly vast network of data to protect—which means new cybersecurity methodologies must be explored. An alternative approach is to address cybersecurity as a data science problem: Better understand all the users and activities across your network so that you can identify which transactions are typical and which are potentially nefarious.</p> <p>The NVIDIA Morpheus AI framework lets cybersecurity developers and practitioners harness the power of GPU computing to implement cybersecurity solutions that perform on a scale never before possible. With Morpheus, cybersecurity developers can create optimized AI pipelines for filtering, processing, and classifying large volumes of real-time data. Bringing a new level of information security to data centers, Morpheus enables dynamic protection, real-time telemetry, and adaptive defenses for detecting and remediating cybersecurity threats.</p> <p>> Learn More</p>	<p>></p> <ul style="list-style-type: none">> Professional data science and/or data analysis experience.> Competency with the Python programming language.> Competency with the Linux command line.

Building Transformer-Based Natural Language Processing	In this workshop, you'll learn how Transformers are used as the building blocks of modern large language models (LLMs). You'll then use these models for various NLP tasks, including text classification, named-entity recognition (NER), author attribution, and question answering. You'll also learn how to analyze various model features, constraints, and characteristics to determine which model is best suited for a particular use case based on metrics, domain specificity, and available resources.	Experience with Python coding and use of library functions and parameters. Fundamental understanding of a deep learning framework, such as TensorFlow, PyTorch, or Keras. And basic understanding of neural networks.

Optimizing CUDA Machine Learning Codes With NVIDIA Nsight™ Profiling Tools	<p>NVIDIA Developer Tools are a collection of applications, spanning desktop and mobile targets, that enable developers to build, debug, profile, and develop class-leading and cutting-edge software using the latest visual computing hardware from NVIDIA. In this course, you'll learn the effective use of two powerful NVIDIA developer tools: Nsight Systems and Nsight Compute.</p> <p>Nsight Systems provide developers with a system-wide visualization of an application's performance. Developers can optimize bottlenecks to scale efficiently across any number or size of CPU and GPU—from large servers to the smallest systems on chip. Nsight Compute is an interactive kernel profiler for CUDA applications. It provides detailed performance metrics and API debugging via a user interface and command-line tool.</p> <p>By the time you complete this course, you'll be able to use Nsight Systems and Nsight Compute to analyze and optimize CUDA applications. Following best practices, you'll begin by using Nsight Systems to analyze overall application structure and explore parallelization opportunities before turning to Nsight Compute to analyze and optimize individual CUDA kernels.</p> <p>> Learn More</p>	Familiarity with machine learning applications using CUDA. How to Build OpenUSD Applications for Industrial Digital Twins	This lab introduces the basics of the NVIDIA Omniverse development platform. You'll learn how to get started building 3D applications and tools that deliver the functionality needed to support industrial use cases and workflows for aggregating and reviewing large facilities such as factories, warehouses, and more.	Intermediate Python experience, including object-oriented programming and libraries.

Introduction to Robotic Simulations in NVIDIA Isaac Sim	Robotic automation has enjoyed great success in recent years with increasing hardware capabilities driving innovation in simulation and machine learning. In this course, we introduce you to Isaac Sim, NVIDIA Omniverse's solution for simulation and robotics.	> Intermediate knowledge and general comfort with Python 3. This includes familiarity with functions, classes, and basic design patterns.												
	You'll learn how to tap into the simulation loop of a 3D engine and initialize experiments with objects, robots, and physics logic. This can be done programmatically using Omniverse Kit and Pixar USD commands, but the course will use Isaac Sim Core to wrap these low-level operations in an object-oriented fashion. By the end of the course, you'll be able to simulate and control NVIDIA JetBot™ and Franka Emika robots and coordinate them together to perform a handoff.	> Comfort with NumPy arrays and basic matrix operations.												
	The skills covered in this course are direct prerequisites for working with Isaac Gym and create a good starting point for exploring Isaac Sim and other Omniverse applications. The course is great for those interested in 3D scene specification and robotic simulation, but it's also useful for researchers looking to expand their toolkits and seasoned developers interested in exploring design patterns for Omniverse Kit development.	> A Windows or Linux machine with NVIDIA Omniverse and the Omniverse Streaming Client app.
